MANUFACTURING & SUPPLY CHAIN TALENT TRANSFORMATION: PEOPLE OR ROBOTS?

Advancements in Artificial Intelligence (AI), the Internet of Things (IoT), technology and customer expectations are transforming manufacturing and how the supply chain responds. Key to successfully embracing these advancements is human capital. The skills needed are changing. Or, are they being replaced?

Our panel discussion will focus on talent needed in today's manufacturing environment, the skills gap and more. Join the discussion, hear from executives and network with other manufacturing and supply chain professionals.
